

Majd Issa

Haifa, Israel | mjd.issa17@gmail.com | <https://www.linkedin.com/in/majd-issa-a1aa8b262/> | github.com/MajdIssaDev

Available to work 2-3 days weekly from the office

Education

University of Haifa

University student studying Computer Science (BSc)

Status: (with at least 3 semesters left before graduation)

Relevant Coursework: Probability for Computer Science, Calculus 2, Operating Systems, Systems Programming, Computer Architecture, Data Structures & Algorithms.

Technical Skills

Core Competencies: Proficiency coding in C, Understanding of embedded systems, C++, C#, Java, Python, Flutter, Swift, Lua, Assembly.

Platforms & Cloud: Linux CLI, Docker, AWS RDS, Firebase, Hibernate, MySQL, Git/GitHub.

Hardware & Networking: Silicon devices, Large and complex boards, Low-Level Networking (TCP/IP), Memory Management, Algorithm Optimization.

Experience

HOT Telecom

Senior Technical Support Representative

Israel

Dec 2021 – Sep 2023

- **Delivered Results:** Earned rapid promotion from Technical Support to Senior Representative by taking ownership of VIP client portfolios and consistently exceeding department diagnostic metrics.
- **Customer Obsession:** Diagnosed and resolved intricate network infrastructure and connectivity issues for 40+ clients daily, driving high customer satisfaction and maintaining end-to-end case tracking.
- **Dive Deep:** Served as a technical advisor, assisting peers with advanced hardware/network diagnostics, root-cause analysis, and critical technical escalations.

Projects

Route Master (Production Logistics Application)

Flutter / Firebase

- **Ownership & Impact:** Architected, engineered, and deployed a comprehensive cross-platform logistics and navigation application that is **actively used daily by a registered business in Israel** to manage real-world operations.
- **Invent & Simplify:** Streamlined complex delivery workflows by integrating custom routing logic, secure backend data streams, and robust API authorization protocols through Firebase.

Low-Level Network Sniffer

C / C++ / Linux

- **Dive Deep:** Engineered a custom packet sniffer demonstrating **proficiency coding in C** and C++ utilizing POSIX raw sockets to intercept, inspect, and analyze live TCP/IP network traffic.
- **Insist on Highest Standards:** Implemented low-level parsing mechanisms for network layer protocols, optimizing memory management to handle high throughput with minimal latency.

Retail Inventory Management Backend

Java / Hibernate / AWS RDS

- **Deliver Results:** Built a scalable backend system for inventory tracking, deploying the relational MySQL database to **AWS RDS** to ensure low-latency data retrieval during high-volume simulated production loads.

High-Performance Automation Suite & Systems Tuning

Lua / C# / Hardware

- **Bias for Action:** Engineered a runtime-optimized automation script implementing A* and Greedy Best-First Search algorithms with a custom Finite State Machine (FSM) for real-time decision-making.
- **Learn and Be Curious:** Executed hardware-level modifications, including GPU thermal pad replacements and extensive BIOS-level tuning (undervolting/overclocking) on an AM5 platform to deeply understand the thermal limits of modern Silicon devices.
